

Suppliers of QUALITY MARINE EQUIPMENT

# LPG cylinders for the 21st century

Southern Seas Marine presents a breakthrough in LPG cylinder design. Using advanced technology we have created a transparent composite cylinder with some amazing advantages over traditional cylinders.

**Visible Gas Level:** The transparent feature enables the user to see the gas level through the wall of the tank, therefore removing the risk of unexpectedly running out of gas during use.

**Lightweight and Ergonomic:** the unique composite construction makes our cylinders lighter and easier to handle. When empty, the cylinder weighs about 50% less than a comparable metal cylinder.

**Non Corrosive:** the composite materials do not corrode therefore the cylinder will not leave rust stains in your vehicle, boat or on the patio.

**Safety:** extensive testing by independent laboratories and fire authorities have shown that the cylinder when attacked by fire will react with a controlled burnout and will not explode.

**UV-Protection:** special additives are included in the cylinders to prevent degrading over time from weather conditions.

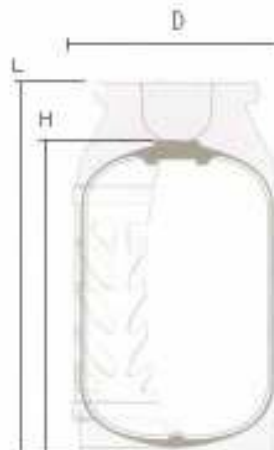

At Southern Seas Marine we are proud of the award-winning design and of the unrivalled safety of our unique cylinder.

*Lightweight, Transparent & Safe*

**10kg**

Propane Capacity	-	10kg
Butane Capacity	-	12kg
Water Capacity	-	23.8 liters
Overall Length (L)	-	587mm
Height to top of boss (H)	-	499mm
Diameter	-	305mm
Tare weight (ex valve)	-	6.3kg

*Pressure ratings:*

<b>Service pressure</b>	20 bar / 294 psi
<b>Test Pressure</b>	30 bar / 441 psi
<b>Required burst pressure</b>	60 bar / 882 psi
<b>Actual burst pressure</b>	150 bar / 2200 psi

Meets standard AS/2030/EN12245
